Code Review Check List For C# Language

Project ID:	Work product:	
Checked By:	Date :	17 de Dezembro de 2022
Note:		

I - DEVIATION OBJECTIVE				
#	I.1 – DEVIATION	Yes	No	NA
1.	Does the code correctly implement the design?	\boxtimes		
2.	Does the code implement more than the design?		\boxtimes	
3.	Is every parameter of every method passing mechanism (value or reference) appropriate?		\boxtimes	
4.	Does every method return the correct value at every method return point?	\boxtimes		
II – OMISSION OBJECTIVE				
#	II.1 –OMISSION	Yes	No	NA
5.	Does the code completely implement the design?	\boxtimes		
6.	Are there any requirements of design that were not implemented?		\boxtimes	
III - D	EFECT OBJECTIVE			
#	III.1 – Variable and Constant Declaration	Yes	No	NA
7.	Are descriptive variable and constant names used in accord with naming conventions?	\boxtimes		
8.	Is every variable correctly typed?	\boxtimes		
9.	Is every variable properly initialized?	\boxtimes		
10.	Are all for-loop control variables declared in the loop header?	\boxtimes		
11.	Are there variables that should be constants?	\boxtimes		
12.	Are there attributes that should be local variables?		\boxtimes	
13.	Do all attributes have appropriate access modifiers (private, protected, public)?		\boxtimes	
14.	Are there static attributes that should be non-static or vice-versa?			\boxtimes
#	III.2 – Method Definition	Yes	No	NA
15.	Are descriptive method names used in accord with naming conventions?	\boxtimes		
16.	Do all methods have appropriate access modifiers (private, protected, public)?		\boxtimes	П
17.	Is every method parameter value checked before being used?	\boxtimes		П
18.	Are there static methods that should be non-static or vice-versa?			\boxtimes
#	III.3 – Class Definition	Yes	No	NA
19.	Does each class have an appropriate constructor?	\boxtimes	П	
20.	Do any subclasses have common members that should be in the superclass?		\boxtimes	
21.	Can the class inheritance hierarchy be simplified?		\boxtimes	
#	III.4 – Data Reference	Yes	No	NA
22.	For every array reference: Is each subscript value within the defined bounds?	\boxtimes		
23.	For every object or array reference: Is the value certain to be non-null?	\boxtimes		
#	III.5 – Computation/Numeric	Yes	No	NA
24.	Are there any computations with mixed data types?		\boxtimes	
25.	Is overflow or underflow possible during a computation?	\boxtimes		
26.	For each expressions with more than one operator: Are the assumptions about order of evaluation	\boxtimes		
	and precedence correct?			
27.	Are parentheses used to avoid ambiguity?			
28.	Does the code systematically prevent rounding errors?			
29.	Does the code avoid additions and subtractions on numbers with greatly different magnitudes?			
30.	Are divisors tested for zero or noise?	\boxtimes		

SW-DI-005-06 - C# Checklist

#	III.6 – Comparison/Relational	Yes	No	NA
31.	Has each boolean expression been simplified by driving negations inward?	\boxtimes		
32.	For every boolean test: Is the correct condition checked?	\boxtimes		
33.	Are there any comparisons between variables of inconsistent types?		\boxtimes	
34.	Are the comparison operators correct?			
35.	Is each boolean expression correct?	\boxtimes		
36.	Are there improper and unnoticed side-effects of a comparison?		\boxtimes	
37.	Has an "&" inadvertently been interchanged with a "&&" or a " " for a " "?		$\overline{\boxtimes}$	
38.	Does the code avoid comparing floating-point numbers for equality?			\boxtimes
39.	Is every three-way branch (less,equal,greater) covered?	$\overline{\boxtimes}$		
#	III.7 – Control Flow	Yes	No	NA
40.	For each loop: Is the best choice of looping constructs used?			
41.	Will all loops terminate?		〒	同
42.	When there are multiple exits from a loop, is each exit necessary and handled properly?		Ħ	同
43.	Does each switch statement have a default case?		一	Ħ
44.	Are missing switch case break statements correct and marked with a comment?	\Box	$\overline{\boxtimes}$	愩
45.	Is the nesting of loops and branches too deep, and is it correct?	Ħ	Ħ	岗
46.	Can any nested if statements be converted into a switch statement?	Ħ	$\overline{\boxtimes}$	Ħ
47.	Are null bodied control structures correct and marked with braces or comments?			片
48.	Does every method terminate?		+	片
49.	Are all exceptions handled appropriately?		+	片
50.	Do named break statements send control to the right place?		H	믐
#	III.8 – Input/Output	Yes	No	NA
51.		I es	NO	INA
51. 52.	Have all files been opened before use?		Η	믐
	Are the attributes of the open statement consistent with the use of the file?		井	╁╬
53.	Have all files been closed after use?		井	╁╬
54.	Is buffered data flushed?		Ц	片片
55.	Are there spelling or grammatical errors in any text printed or displayed?			
56. 	Are error conditions checked?		브	│
57.	Are files checked for existence before attempting to access them?		Щ	닏
58.	Are all I/O exceptions handled in a reasonable way?		Ш	
#	III.9 – Module Interface	Yes	No	NA
59.	Are the number, order, types, and values of parameters in every method call in agreement with the called method's declaration?		Ш	Ш
60.	Do the values in units agree (e.g., inches versus yards)?	\boxtimes	П	
61.	If an object or array is passed, does it get changed, and changed correctly by the called method?	\boxtimes		
#	III.10 – Comment	Yes	No	NA
62.	Does every method, class, and file have an appropriate header comment?		П	П
63.	Does every attribute, variable or constant declaration have a comment?	\Box	\boxtimes	\Box
64.	Is the underlying behavior of each method and class expressed in plain language?	\boxtimes	Ħ	厅
65.	Is the header comment for each method and class consistent with the behavior of the method or class?			
66.	Are all comments consistent with the code?		П	\vdash
67.	Do the comments help in understanding the code?		一	片
68.	Are there enough comments in the code?		H	╁┼┼
69.	Are there too many comments in the code? Are there too many comments in the code?			片
09. #		Yes		NA
	III.11 – Layout and Packing		INO	IVA
70.	Is a standard indentation and layout format used consistently?			╁╬
71.	For each method: Is it no more than about 60 lines long?		\boxtimes	\sqcup

SW-DI-005-06 - C# Checklist

72.	For each compile module: Is no more than about 600 lines long?			
#	III.12 – Modularity	Yes	No	NA
73.	Is there a low level of coupling between modules (methods and classes)?		\boxtimes	
74.	Is there a high level of cohesion within each module (methods or class)?		\boxtimes	
75.	Is there repetitive code that could be replaced by a call to a method that provides the behavior of the repetitive code?	\boxtimes		
76.	Are the Java class libraries used where and when appropriate?			\boxtimes
#	III.13 – Storage Usage	Yes	No	NA
77.	Are arrays large enough?	\boxtimes		
78.	Are object and array references set to null once the object or array is no longer needed?		\boxtimes	
#	III.14 – Performance	Yes	No	NA
79.	Can better data structures or more efficient algorithms be used?			
80.	Are logical tests arranged such that the often successful and inexpensive tests precede the more pensive and less frequently successful tests?			
81.	Can the cost of recomputing a value be reduced by computing it once and storing the results?		\boxtimes	
82.	Is every result that is computed and stored actually used?	\boxtimes		
83.	Can a computation be moved outside a loop?		\boxtimes	
84.	Are there tests within a loop that do not need to be done?		\boxtimes	
85.	Can a short loop be unrolled?		\boxtimes	
86.	Are there two loops operating on the same data that can be combined into one?		\boxtimes	
87.	Are frequently used variables declared register?	\boxtimes		
88.	Are short and commonly called methods declared inline?	\boxtimes		
89.	Are timeouts or error traps used for external device accesses?			\boxtimes
IV - IN	NCONSISTENCY OBJECTIVE			
#	IV.1 – Performance	Yes	No	NA
				117
90.	Are there any code implement in inconsistent way?			
90. V – A	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE			
90. V – A #	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE V.1 – Variable and Constant Declaration	Yes	No	NA
90. V – A # 91.	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE V.1 – Variable and Constant Declaration Are there variables with confusingly similar names?	Yes		
90. V - A # 91. 92.	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE V.1 – Variable and Constant Declaration Are there variables with confusingly similar names? Are all variables properly defined with meaningful, consistent, and clear names?	Yes	No	
90. V - A # 91. 92. #	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE V.1 – Variable and Constant Declaration Are there variables with confusingly similar names? Are all variables properly defined with meaningful, consistent, and clear names? V.2 – Performance	Yes	No Do No	
90. V - A # 91. 92. # 93.	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE V.1 – Variable and Constant Declaration Are there variables with confusingly similar names? Are all variables properly defined with meaningful, consistent, and clear names? V.2 – Performance Are any modules excessively complex and should be restructured or split into multiple routines?	Yes	No	
90. V - A # 91. 92. # 93. VI - F	Are there any code implement in inconsistent way? MBIGUITY OBJECTIVE V.1 – Variable and Constant Declaration Are there variables with confusingly similar names? Are all variables properly defined with meaningful, consistent, and clear names? V.2 – Performance Are any modules excessively complex and should be restructured or split into multiple routines? REDUNDANCE OBJECTIVE	Yes Yes Yes	No No No No	NA III

SW-DI-005-06 - C# Checklist

	Paths of improvements
#	VIII.1 – Major identified errors
102.	
	Verificamos existência de funções locais que podiam ser transformados em métodos.
#	VIII.2 – Improvements suggestions
103.	
	Transformação das funções locais em métodos.
